PROFESSIONAL SUMMARY

AI Product Engineer who turns loosely defined business problems — “we need an ERP,” a client portal, an internal dashboard — into working, deployed applications end-to-end, directing AI coding tools (primarily Claude Code) as the engineering team. Owns the database, framework, and deployment calls; scopes ruthlessly to what is good enough now versus what must be robust on day one; and validates, tests, and corrects AI output until the software runs in production. Builds AI agents and agentic workflows; shipped a UK photo & print e-commerce MVP in one week and an LLM risk-scoring MVP in nine days, and moves into unfamiliar domains — fintech trade finance, cybersecurity, gaming — in days, not months. Brings concrete opinions on where AI-assisted development breaks (context limits, hallucinated APIs, architectural drift) and the workflow discipline — PRD-first specs, CLAUDE.md context files — to engineer around it.

TECHNICAL SKILLS

AI-Native Building & Workflow: Claude Code (primary), Cursor IDE, Lovable, Bolt; PRD-first planning, CLAUDE.md / markdown context management, structuring repos so AI can work with them, prompt engineering, catching and correcting AI errors; MCP server architecture, AI agents, multi-agent orchestration, agentic workflows, n8n

Languages: Python, TypeScript, JavaScript, Node.js — read and direct code confidently; pragmatic about when each language fits

Frontend: React, Next.js — components, state management, responsive and performant UI

Backend & APIs: FastAPI, Express / Node.js; REST APIs, authentication flows, server-side logic and request handling

Databases: PostgreSQL (via Supabase), SQLite; schema design, indexing, migrations, sensible data modelling, choosing the right store for the job

Testing & Delivery: Validation and testing of AI-generated code (smoke and integration), catching regressions; production deployment and cloud hosting on Vercel, Netlify, and Supabase

LLM & Generative AI: Claude API, OpenAI API (GPT-4o), Gemini API; LLM evaluation, RAG; generative media (Midjourney, Kling 3.0, VEO 3, ElevenLabs Voice AI)

Product & Stakeholders: Decomposing vague needs into buildable scope, 80/20 prioritisation, end-user focus, communicating trade-offs clearly to non-technical stakeholders

PROFESSIONAL EXPERIENCE

AI Product Engineer / AI Builder — Freelance / Self-Directed

Feb 2026 – Present · Remote

- Take loosely defined business problems and ship working, deployed applications end-to-end — directing Claude Code as the engineering team while owning architecture, scope, testing, and delivery.
- Mo2 (UK): from a loose brief, built and shipped a photo & print e-commerce MVP with Claude Code in one week — five product types (photo prints, canvas, business and document printing, AI-checked passport photos), a server-side live-pricing engine, Stripe checkout, and an admin back office.
- Make the architecture calls per project: PostgreSQL/Supabase schema and data-model design, server-side pricing logic, MCP server integrations, and multi-agent orchestration via Claude Code and n8n.
- Delivered working AI tools as documented, deployed GitHub repositories for a non-technical client — scoping the build, communicating trade-offs in plain language, and handing off under a formal milestone-based service agreement.
- Run a deliberate AI-native workflow — PRD-first specs and CLAUDE.md context files — to steer large builds and work around context limits, hallucinated APIs, and architectural drift.

AI Prompt Engineer — AZer-t (French Video Game Studio)

Sep 2025 – Jan 2026 · Remote

- Directed multi-modal AI pipelines to produce production-quality game assets, cutting per-asset outsourcing costs 30% and iteration time 40% versus manual methods.
- Integrated ElevenLabs voice AI agents for 3 in-game NPC characters, eliminating manual dialogue production and enhancing player immersion.
- Built prompt-driven 3D modelling workflows targeting photorealistic Unreal Engine 5 aesthetics and shipped 10+ versus-style marketing campaign assets on deadline.

SELECTED PROJECTS (DEMOABLE)

- **Trade Finance Automation Platform** — Built solo as an internal-business-system demo — a 9-agent workflow covering a five-phase trade-deal lifecycle. Learned the domain from scratch and shipped.
- **VentureScout (scout-hub-pro)** — LLM-powered startup risk-scoring tool — loose idea to live MVP in ~9 days. venuturescout.lovable.app
- **Cybersecurity SME Toolset** — Endpoint-security tools (coverage mapper, secure-build generator, audit-evidence packager) built with a domain expert and deployed to Vercel.
- **PDF Interactive Platform** — Full-stack AI tool for document processing and data extraction. github.com/EmperorDa8/pdf-platform
- **Agentic X-Bot** — Autonomous AI agent running its own content/engagement loop; multi-step logic routing and API orchestration. github.com/EmperorDa8/agentic-x-bot
- **Lyrical Mood Art Generator** — Live AI web app that turns a song's mood and lyrics into custom artwork. galaxyflow.lovable.app
- **YouRev** — AI-powered YouTube comparison and review tool. you-rev.vercel.app

EDUCATION & CERTIFICATIONS

BSc Computer Science — National Open University of Nigeria (NOUN) — 2021–2024

- Google Generative AI Studio Certification — Google
- Google IT Automation with Python Certification — Google
